**Pearson Edexcel International Advanced Level**

**Monday 13 January 2025**

Afternoon (Time: 2 hours)

Paper reference **WPS02/01**

**Psychology**

**International Advanced Subsidiary**

**UNIT 2: Biological Psychology, Learning Theories and Development**

You do not need any other materials.

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

## Information

- The total mark for this paper is 96.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- The list of formulae and statistical tables are printed at the start of this paper
- Candidates may use a calculator.

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

## FORMULAE AND STATISTICAL TABLES

### Standard deviation (sample estimate)

$$\sqrt{\left(\frac{\sum (x - \bar{x})^2}{n-1}\right)}$$

### Spearman's rank correlation coefficient

$$1 - \frac{6 \sum d^2}{n(n^2 - 1)}$$

### Critical values for Spearman's rank

| Level of significance for a one-tailed test |       |       |       |       |        |
|---------------------------------------------|-------|-------|-------|-------|--------|
|                                             | 0.05  | 0.025 | 0.01  | 0.005 | 0.0025 |
| Level of significance for a two-tailed test |       |       |       |       |        |
| N                                           | 0.10  | 0.05  | 0.025 | 0.01  | 0.005  |
| 5                                           | 0.900 | 1.000 | 1.000 | 1.000 | 1.000  |
| 6                                           | 0.829 | 0.886 | 0.943 | 1.000 | 1.000  |
| 7                                           | 0.714 | 0.786 | 0.893 | 0.929 | 0.964  |
| 8                                           | 0.643 | 0.738 | 0.833 | 0.881 | 0.905  |
| 9                                           | 0.600 | 0.700 | 0.783 | 0.833 | 0.867  |
| 10                                          | 0.564 | 0.648 | 0.745 | 0.794 | 0.830  |
| 11                                          | 0.536 | 0.618 | 0.709 | 0.755 | 0.800  |
| 12                                          | 0.503 | 0.587 | 0.678 | 0.727 | 0.769  |
| 13                                          | 0.484 | 0.560 | 0.648 | 0.703 | 0.747  |
| 14                                          | 0.464 | 0.538 | 0.626 | 0.679 | 0.723  |

| 16                                          | 0.429 | 0.503 | 0.582 | 0.635 | 0.679  |
| 17                                          | 0.414 | 0.485 | 0.566 | 0.615 | 0.662  |
| 18                                          | 0.401 | 0.472 | 0.550 | 0.600 | 0.643  |
| 19                                          | 0.391 | 0.460 | 0.535 | 0.584 | 0.628  |
| 20                                          | 0.380 | 0.447 | 0.520 | 0.570 | 0.612  |
| 21                                          | 0.370 | 0.435 | 0.508 | 0.556 | 0.599  |
| 22                                          | 0.361 | 0.425 | 0.496 | 0.544 | 0.586  |
| 23                                          | 0.353 | 0.415 | 0.486 | 0.532 | 0.573  |
| 24                                          | 0.344 | 0.406 | 0.476 | 0.521 | 0.562  |
| 25                                          | 0.337 | 0.398 | 0.466 | 0.511 | 0.551  |
| 26                                          | 0.331 | 0.390 | 0.457 | 0.501 | 0.541  |
| 27                                          | 0.324 | 0.382 | 0.448 | 0.491 | 0.531  |
| 28                                          | 0.317 | 0.375 | 0.440 | 0.483 | 0.522  |
| 29                                          | 0.312 | 0.368 | 0.433 | 0.475 | 0.513  |
| 30                                          | 0.306 | 0.362 | 0.425 | 0.467 | 0.504  |

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

### Chi-squared distribution formula

$$X^2 = \sum \frac{(O-E)^2}{E} \quad df = (r-1)(c-1)$$

### Critical values for chi-squared distribution

| Level of significance for a one-tailed test |       |       |       |       |        |        |
|---------------------------------------------|-------|-------|-------|-------|--------|--------|
|                                             | 0.10  | 0.05  | 0.025 | 0.01  | 0.005  | 0.0005 |
| Level of significance for a two-tailed test |       |       |       |       |        |        |

| 24                                          | 29.55 | 33.20 | 36.42 | 39.36 | 42.98  | 51.18  |
| 25                                          | 30.68 | 34.38 | 37.65 | 40.65 | 44.31  | 52.62  |
| 26                                          | 31.80 | 35.56 | 38.89 | 41.92 | 45.64  | 54.05  |
| 27                                          | 32.91 | 36.74 | 40.11 | 43.20 | 46.96  | 55.48  |
| 28                                          | 34.03 | 37.92 | 41.34 | 44.46 | 48.28  | 56.89  |
| 29                                          | 35.14 | 39.09 | 42.56 | 45.72 | 49.59  | 58.30  |
| 30                                          | 36.25 | 40.26 | 43.77 | 46.98 | 50.89  | 59.70  |
| 40                                          | 47.27 | 51.81 | 55.76 | 59.34 | 63.69  | 73.40  |
| 50                                          | 58.16 | 63.17 | 67.51 | 71.42 | 76.15  | 86.66  |
| 60                                          | 68.97 | 74.40 | 79.08 | 83.30 | 88.38  | 99.61  |
| 70                                          | 79.72 | 85.53 | 90.53 | 95.02 | 100.43 | 112.32 |

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

### Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

### Critical values for the Wilcoxon Signed Ranks test

| <i>n</i> | Level of significance for a one-tailed test |       |      |
|----------|---------------------------------------------|-------|------|
|          | 0.05                                        | 0.025 | 0.01 |
|          | Level of significance for a two-tailed test |       |      |
|          | 0.1                                         | 0.05  | 0.02 |
| N=5      | 0                                           | –     | –    |
| 6        | 2                                           | 0     | –    |
| 7        | 3                                           | 2     | 0    |
| 8        | 5                                           | 3     | 1    |
| 9        | 8                                           | 5     | 3    |
| 10       | 11                                          | 8     | 5    |
| 11       | 13                                          | 10    | 7    |
| 12       | 17                                          | 13    | 9    |

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

**(Total for Question 1 = 4 marks)**

- 2 Loreen conducted an investigation to see if there was a relationship between the amount of exercise people did on average in a week and the amount of sleep they had on average each night.

Loreen used an opportunity sampling technique and handed her participants a questionnaire.

The questionnaire consisted of two questions. The first question was "How many hours on average per week do you spend on exercise?" The second question was "What is the average number of hours you sleep per night?"

- (a) Give a fully operationalised, non-directional (two-tailed) hypothesis for Loreen's investigation.

(2)

---

---

---

---

---

---

---

Loreen calculated a Spearman's rank test on her data.

- (b) Calculate Spearman's rank test to **three** decimal places for the data gathered by Loreen by completing **Table 1**.

The formulae and statistical tables can be found at the front of the paper.

You **must** show your working out.

(4)

| Average number of hours spent on exercise per week | Rank 1 | Average number of hours slept per night | Rank 2 | $d$ | $d^2$ |
|----------------------------------------------------|--------|-----------------------------------------|--------|-----|-------|
| 7                                                  | 4      | 9                                       | 5      |     |       |
| 3                                                  | 2      | 7                                       | 3      |     |       |
| 10                                                 | 5      | 8                                       | 4      |     |       |
| 5                                                  | 3      | 6                                       | 1.5    |     |       |
| 1                                                  | 1      | 6                                       | 1.5    |     |       |
| Total for $d^2$                                    |        |                                         |        |     |       |

- 5** Remo is 19 years old. He has been working at his local shop but recently lost his job because he became aggressive and shouted at a customer. Remo has also been banned from watching his local football team because he and his friends were in a fight with supporters of the opposing team after a match.

Remo's partner has threatened to leave him due to an incident at a restaurant where Remo threw his drink at the waiter because he was not satisfied with his food. Remo's parents have tried to talk to him about his aggressive behaviour but he just shouted at them.

Discuss hormones as an explanation of Remo's aggressive behaviour.

9 Floella conducted an investigation to see if giving dogs a treat would teach them how to identify drugs hidden in bags.

- Condition A: the dogs were given a treat when they found drugs in a bag
- Condition B: the dogs were not given a treat when they found drugs in a bag.

Her results are shown on **Table 2**.

| <b>Condition A:<br/>Number of times<br/>each dog given a treat<br/>found drugs in a bag</b> | <b>Condition B:<br/>Number of times<br/>each dog not given a treat<br/>found drugs in a bag</b> |
|---------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| 9                                                                                           | 1                                                                                               |
| 7                                                                                           | 0                                                                                               |
| 10                                                                                          | 2                                                                                               |
| 9                                                                                           | 0                                                                                               |

**QUESTION 12 BEGINS ON THE NEXT PAGE.**

- 12** Benjamin has just lost his place on the cricket team because he shouted at the captain. Benjamin said the captain was aggressive towards him and said he had no talent for cricket. The captain looks similar to Benjamin's father.

Benjamin's partner has said Benjamin can be very untidy at home, often leaving his belongings lying around and not tidying up after he has eaten. Benjamin can be aggressive at home, shouting at his partner if asked to do household chores. Once he smashed the television because his partner repeatedly asked him if he would help tidy the house.

On a recent trip to the theatre with his friends, Benjamin thought someone had taken his place in a queue and pushed that person out of the way. This meant Benjamin and his friends were told to leave the theatre.

To what extent can genes and Freud's theory of development explain Benjamin's behaviour?

You must refer to the context in your answer.
